

Having access to instant weather and traffic. It is not only a matter of personal safety and convenience. It also aids the general public by diverting traffic from possible trouble areas. I have work as a field service engineer and this is a great benefit when in a strange area, you do not have to search for a radio station that gives traffice and weather information and stay on a station for thirty minutes to get 30 seconds of information and 25 minutes of commercials.

Thank;
